**Notification of Rejection(s) and/or Objection(s)**

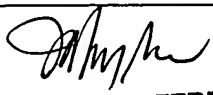

#	Claim(s)	Reference(s) (if applicable)	Rejection Statutory Basis	Brief Explanation of Rejection
1	1-3, 13, 17-19, 21, 26, 28, 33	Tweedly, Milton	103 (a)	The references teach the claimed method for routing data over a packet-based infrastructure in a compressed header format identified by a context identifier for its data stream (Tweedly-Col.3, Line 58-Col.4, line 45; FIG.1-3)

**Expanded Discussion/Commentary**

1	each datagram in the tunnel packet can be sent in a compressed header format identified by a context identifier (CID) for its data stream. (Tweedly-Col.8, Line 15; Col.9-Line 55 FIG.7-9)
1	Using a compression/decompression, the data packet can be compressed on a pre packet basis whereas the first/second header is compressed on a link basis (Tweedly-Col.8, Line 15; Col.9-Line 55 FIG.7-9)
1	and a corresponding CRTP de-compressor at node 52 restores the RTP/UDP/IP header using the session context, each link would have to maintain a CRTP Compression and de-compressor (Tweedly-Col.8, Line 15; Col.9-Line 55 FIG.7-9)
1	Except for forwarding/routing data packet at an input/output. However, the claims will be given a broad reasonable interpretation for the purposes of examination as best understood whereas Milton teaches teaches routing and forwarding input/out data packets (Milton-Col.3, Line 35 FIG.1)
1.	data-grams from multiple data streams are packaged in a single tunnel packet for transport across a network to an intermediate switching point "router device" (Tweedly-Col.3, Line 58-Col.4, line 45; FIG.1-3)
1	a point to point protocol packet header compressor 600 (and/or decompressor) having an input/output that receives point to point packets (Milton-Col.3, Line 60; FIG.3)
